

Jupiter Ferris Wheel

Where is the ride located?

Location: Berliner Platz - Mitte

The unique Ferris wheel

© Sven Betz

The Jupiter Ferris Wheel is unique in design and equipment worldwide. The attractive and detailed elaborate exterior design in combination with the impressive total height of approx. 50 metres makes it the central eye-catcher and a popular meeting point at every event.

Properties

50 m

The most modern and flexible gondola concept on a mobile Ferris wheel.

Our passengers take a seat in one of the new 36 enclosed gondolas for a panoramic ride to lofty heights. The closed design offers a carefree ride, which is particularly important for families with children and senior citizens. But the new gondolas also give more anxious people a maximum feeling of safety and security, allowing them to enjoy the Ferris wheel ride to the fullest. Perfect protection from the weather included.

The gondola glides gently out of the station. If desired, the passenger can press a button to start the audio guide, which provides interesting information about the Jupiter Giant Ferris Wheel. The unrestricted view is magnificent and opens up completely new perspectives for the passengers.

If you as an organiser prefer a Ferris wheel with open gondolas, the glass panels can easily be removed from the gondolas - if required, also on a daily basis or only for a certain number of gondolas! The capacity of a gondola is always 8 passengers!

Dignified flair - maximum safety

The consistent and coherent design concept gives the Jupiter Ferris Wheel its unique, dignified flair and makes it an unmistakable highlight that people talk about. The station and ticket office areas have been completely redesigned, and the sides of the Jupiter Ferris Wheel are now lavishly clad.

In the course of installing the new gondolas, the entire Ferris wheel was recalculated in 2018 according to DIN EN 13814 and has been approved by TÜV Nord. Another special feature is the suitability of the installation for wind load zone 4. In contrast to Ferris wheels in lightweight construction (suitable up to max. wind load zone 3), our gondolas only need to be removed from 30 m/s, wind force 10.
