For the first time, there is a mobile free fall tower that celebrates real free fall.

The world's first mobile free fall tower

For the first time, there is a mobile free fall tower that celebrates real free fall. The 24 passengers are pulled to the top of the tower by means of steel cables on two hooks that connect the conveyor sled to the gondola. The courage to ride is rewarded with a view into the distance that is unsurpassed in a mobile tower installation to this day.

With a gentle jerk and the greatest possible surprise, the gondola detaches itself from the hook and plunges into the depths without any rope connection. From breathless to a loud scream - from a stare to a face beaming with joy - everything that fits in the gondola is in the gondola. Just before the ground and brakes SkyFall gently with magnetic brakes that work without electricity and thus guarantee maximum safety.

SkyFall Highlights:

- Real **FREE FALL** from a **height of 80 metres**.
- Capacity: **24 passengers**
- **Magnetic brake** (works without electricity)
- Modern construction technology without crane
- Built according to **DIN EN 13814 TÜV SÜD / Munich**
