Thrills at lofty heights

© Skeon

Goetzke's 'Skyfall' is not for the faint-hearted: first you're hoisted up to a height of 80 metres, then comes the free fall - complete with plenty of speed, thrills and a brief glimpse of the funfair. A mobile free-fall tower that celebrates the thrill of a real free fall. The 24 passengers are hauled to the top of the tower by a steel cable attached to two hooks that connect the carrier carriage to the gondola. Those brave enough to take the ride are rewarded with a view into the distance that remains unrivalled to this day amongst mobile tower attractions. With a gentle jolt and the greatest possible element of surprise, the gondola breaks free from the hook and plummets into the depths without any cable connection. From bated breath to loud screams - from a fixed stare to a face beaming with joy - every emotion imaginable is on board, along with everyone who fits into the gondola. Just before hitting the ground, Skyfall brakes gently using magnetic brakes that operate without electricity, thus ensuring maximum safety.
