

15. January 2026

Climate and environment

Free energy and refurbishment advice

Information on the topic of renovating old buildings // 29 January 2026, 4 pm // Registration required

The new event series "Energy & Refurbishment IMPULSE" provides a practical information and exchange format on the topic of the heating transition in your own home.

With the municipal heating plan adopted last year, the city of Bocholt is taking an important step towards a climate-friendly and affordable energy supply. In order to actively involve citizens in this process, the city of Bocholt is now launching a new, practical information and exchange format together with experienced energy and refurbishment consultants. During the event, participants can find out how refurbishment work can permanently reduce energy costs in older buildings and which state subsidies are available for this.

In order to ensure a personal exchange, the event is limited to a small group of 25 people. Firstly, an energy expert will provide impulses on current topics relating to the home. Afterwards, the focus is on open dialogue and offers space for your questions, your ideas and your own personal situation.

The dialogue can focus on

- Building envelope and modern building technology
- Funding opportunities for refurbishment measures
- Use of renewable energies
- Energy performance certificate
- Heat insulation and climate adaptation

Registration

The first date of the event is on 29 January at 4 pm in the Bocholt city administration (Kaiser-Wilhelm-Straße 52-58). Participation is free of charge. Due to the limited number of places, registration is required via beteiligung.nrw.de/k/1020949. Further information is available at www.bocholt.de/altbausanierung.
