Subsidised solar advice: expert gives important tips

Support programme in Bocholt // Online advice for 80 euros

Is a PV system on my roof worthwhile? How big should it be? What do I need to consider? An independent expert can provide assistance; an individual expert discussion is subsidised by the city of Bocholt for homeowners.

The city of Bocholt offers its citizens the opportunity to receive subsidised, neutral and non-binding advice on photovoltaic systems. The offer has already been used many times in the past to recognise the advantages of a photovoltaic system and to discover possible savings potential.

Via the individual online consultation, citizens from Bocholt can either obtain an initial impression of an individual system design or receive further advice on more precise savings potential, design options and costs. After the consultation, a comprehensive report will also be drawn up and sent to you. The report can then be used as a guideline for a tradesman appointment.

The personal contribution for this subsidised offer is 80 euros, which corresponds to a 50 percent subsidy from the city of Bocholt. Depending on requirements, topics can include the combination of solar power systems with heating systems, a heat pump or a wallbox, as well as the realisation of a solar power system in combination with green roofs.

Appointments can be made directly by telephone or email via the city's cooperation partner, Klimaagentur Rhein-Ruhr. Appointments are available Monday to Friday from 9 am to 5 pm. This subsidised offer from the city of Bocholt is limited.

The online counselling takes place via the Teams video platform; no download or registration is necessary, the guest simply enters via the previously sent link, i.e. via the web. In order to be able to provide the most personalised advice possible, your own electricity consumption should be known.
