VHS lecture on the subject of "Balcony power station"

Tuesday, 9 April, 19:30 at the media centre

The VHS Bocholt-Rhede-Isselburg is offering a lecture on the current topic "The mini-photovoltaic system for personal use" on Tuesday, 9 April. Speaker Gregor Berning will explain everything about the operation, installation, safety, formalities and savings potential of mini-photovoltaic systems. The event starts at 19:30 in the media centre. Participation costs 6 euros. Registration at www.vhs-bocholt.de. Remaining places will be allocated at the box office.

Current energy prices are still a major issue in Germany. For anyone who wants to make a contribution to sustainable power generation and save money at the same time, balcony power plants can be a good way to get started. The small solar systems generate electricity and feed it directly into your own home or rented flat. Although a balcony power station is not enough to cover the entire electricity requirements of your own home, it will reduce your electricity bill from day one.
