

03. February 2023

Environmental Department

Improve thermal insulation - increase property value".

Event for homeowners // 8 February 2023, 5:30 pm at the Europahaus // Admission free

Many of the properties built in Bocholt in the 1950s to 1970s have great potential for upgrading. Even small steps can sometimes have a big effect, for example by sealing window frames, targeted insulation, encasing pipes or installing solar collectors. A lot can also be done on one's own.

With the help of the 1500 ThermoCards that were distributed in Bocholt last week, many homeowners can become detectives in their own homes. The aim is to check the building fabric and detect cold areas on the inside of exterior walls. Anyone who enjoys investigating and optimising is invited to the event.

Increasing thermal insulation - improving property value

on Wednesday, 8 February 2023, at 5:30 p.m. in the Europahaus, Adenauer Allee 59, in Bocholt. The organiser is the city of Bocholt, admission is free. Individual experiences and questions are explicitly welcome. "I am looking forward to an exciting evening, together with the Rhein Ruhr Climate Agency and energy consultant Björn Gottemeier from Bottrop," says environmental officer Angela Theurich.

Anyone who does not have time on this day but would still like to find out more will find valuable information on the website of the City of Bocholt, www.bocholt.de, under "City Hall, Environment and Climate Protection"; e.g. practical renovation videos, subdivided according to building components, a list of energy efficiency experts working in Bocholt and recognised by the federal government, as well as a link to current funding programmes of the state and the federal government.
