

Health and care

Goals

The aim is to contribute to the best possible health care for the citizens in the region. Care must also be designed in such a way that as much quality of life as possible is maintained. One of the greatest challenges is to counteract the shortage of skilled workers. We are committed to this:

- The working group Health and Care of the Seniors' Advisory Council takes care of the concerns of the older generation in Bocholt around the topics of health, care and homes, prevention, nutrition and sports.
- The working group keeps itself informed about health care in old age, about working and living conditions in homes as well as in outpatient and inpatient care.
- The working group regularly discusses the latest legal provisions in this area. The working group wants to improve the quality in home care and in nursing and retirement homes.
